The claims have not been amended but are included below for the convenience of the Examiner.

Listing of Claims:

- 1-2. (Cancelled).
- 3. (Currently Amended) A method of transcoding dissimilar payloads, the method comprising:

demultiplexing, at a device, a first <u>digital</u> transport stream to recover first and second <u>digital</u> payloads that were each carried in the first <u>digital</u> transport stream prior to demultiplexing;

determining whether a protocol associated with the second <u>digital</u> payload is dissimilar from a protocol associated with the first <u>digital</u> payload;

transcoding the second <u>digital</u> payload to the protocol associated with the first <u>digital</u> payload if the protocol associated with the second <u>digital</u> payload is determined to be dissimilar from the protocol associated with the first <u>digital</u> payload; and

multiplexing the first <u>digital</u> payload and the transcoded second <u>digital</u> payload to a second <u>digital</u> transport stream.

- 4. (Currently Amended) The method of claim 3 wherein the protocol associated with the first <u>digital</u> payload is older than the protocol associated with the second <u>digital</u> payload, and the second <u>digital</u> payload is transcoded to the older protocol.
- (Currently Amended) The method of claim 3 wherein the protocol associated with the
 first digital payload is less compressive than the protocol associated with the second digital
 payload, and the second digital payload is transcoded to the less compressive protocol.
- (Cancelled)
- (Currently Amended) The method of claim 3 further comprising decrypting conditional access (CA) encryption of the first <u>digital</u> transport stream prior to demultiplexing.

Application. No.: 10/597,574 Reply to Office Action of July 6, 2010

- (Currently Amended) The method claim 7 further comprising decrypting the CA encryption of the first <u>digital</u> transport stream in a settop box (STB).
- 9. (Currently Amended) The method of claim 3 wherein the steps of demultiplexing the first digital transport stream, transcoding the second digital payload, and multiplexing the first and transcoded second digital payloads occur in a card inserted into a card slot of a first interface device.
- 10. (Currently Amended) The method of claim 9 further comprising decoding copy protection of the first <u>digital</u> transport stream in the card and prior to the demultiplexing, transcoding, and multiplexing.
- (Currently Amended) The method of claim 10 further comprising encoding copy protection to the second digital transport stream.
- 12. (Currently Amended) The method of claim 11 further comprising transmitting the copy protection encoded second digital transport stream from the card to the first interface device.
- 13-28. (Cancelled).
- 29. (Currently Amended) A method, comprising:

demultiplexing, at a device, a first <u>digital</u> transport stream to recover a plurality of first <u>digital</u> payloads and a plurality of second <u>digital</u> payloads that were each carried in the first <u>digital</u> transport stream prior to demultiplexing, each of the first <u>digital</u> payloads being formatted according to a first protocol, and each of the second <u>digital</u> payloads being formatted according to a second protocol;

transcoding each of the second <u>digital</u> payloads to be formatted according to a protocol that depends upon the first protocol; and

multiplexing the first <u>digital</u> payloads with the transcoded second <u>digital</u> payloads into a second <u>digital</u> transport stream.

30. (Currently Amended) The method of claim 29, further comprising:

Application. No.: 10/597,574 Reply to Office Action of July 6, 2010

prior to demultiplexing, decoding the first digital transport stream to remove copy protection; and

after multiplexing, encoding the second digital transport stream to be copy protected.

31. (Currently Amended) The method of claim 30, further comprising:

prior to demultiplexing and prior to decoding, encoding the first <u>digital</u> transport stream to be copy protected;

after multiplexing and after encoding the second <u>digital</u> transport stream, decoding the second <u>digital</u> transport stream to no longer be copy protected; and

after decoding the second <u>digital</u> transport stream, demultiplexing the second <u>digital</u> transport stream to recover the first and transcoded second <u>digital</u> payloads.

32. (Currently Amended) An apparatus, comprising:

a first demultiplexor configured to demultiplex a first <u>digital</u> transport stream to recover a plurality of first <u>digital</u> payloads and a plurality of second <u>digital</u> payloads that were each carried in the first <u>digital</u> transport stream prior to demultiplexing, each of the first <u>digital</u> payloads being formatted according to a first protocol, and each of the second <u>digital</u> payloads being formatted according to a second protocol;

- a transcoder configured to transcode each of the second <u>digital</u> payloads in a manner that depends upon the first protocol; and
- a multiplexor configured to multiplex the first <u>digital</u> payloads with the transcoded second <u>digital</u> payloads into a second <u>digital</u> transport stream.
- 33. (Currently Amended) The apparatus of claim 32, further comprising:
- a first copy protection decoder configured to decode the first <u>digital</u> transport stream to remove copy protection; and
- a first copy protection encoder configured to encode the second <u>digital</u> transport stream received from the multiplexor to be copy protected.

Application. No.: 10/597,574 Reply to Office Action of July 6, 2010

- 34. (Currently Amended) The apparatus of claim 33, further comprising:
- a second copy protection encoder configured to encode the first <u>digital</u> transport stream to be copy protected and transmit it to the first copy protection decoder;
- a second copy protection decoder configured to decode the second <u>digital</u> transport stream received from the first copy protection encoder, so as to no longer be copy protected; and
- a second demultiplexor configured to demultiplex the second <u>digital</u> transport stream received from the second copy protection decoder, to separate the first <u>digital</u> payloads from the second digital payloads.
- 35. (Currently Amended) The apparatus of claim 32, wherein the demultiplexor, the transcoder, and the multiplexor are on a first hardware module that is configured to be inserted into a receiver device that is configured to decode <u>digital</u> payloads formatted according to the second protocol.
- 36. (Currently Amended) The apparatus of claim 33, wherein the demultiplexor, the transcoder, the multiplexor, the first copy protection encoder, and the first copy protection decoder are on a first hardware module that is configured to be inserted into a second hardware module that is configured to decode <u>digital</u> payloads formatted according to the second protocol.
- 37. (Previously Presented) The apparatus of claim 34, wherein the demultiplexor, the transcoder, the multiplexor, the first copy protection encoder, and the first copy protection decoder are on a first hardware module that is configured to communicate with a second hardware module that contains the second copy protection encoder, the second copy protection decoder, and the second demultiplexor.
- 38. (Currently Amended) The method of claim 29, further comprising transmitting the second <u>digital</u> transport stream to a device that is configured to receive <u>digital</u> transport streams containing <u>digital</u> payloads formatted according to the first protocol.
